

A CLINICAL RESEARCH STUDY TO PREVENT COVID-19 IN ADULTS EXPOSED TO SARS-CoV-2

ABOUT THE STUDY:

We are seeking volunteers to participate in a study to evaluate the efficacy and safety of an inhalation solution to reduce the infection rate and progression to COVID-19 in adults exposed to SARS-CoV-2 infection.

YOU OR A LOVED ONE MAY QUALIFY IF YOU:

- Are 18 years of age or older
- Must have documented exposure to SARS-CoV-2
- Must be 50 years or older if the exposure is due to cohabitation
- Must have the ability to understand and give informed consent

There are additional requirements to participate. A study representative will discuss them with you.

If you volunteer and qualify, you will be followed for a duration of approximately 28 days to assess the incidence of SARS-CoV-2 infection and progression to COVID-19. You receive up to 4 doses of study drug or placebo via nebulizer, over 10 days. You will continue to be monitored and tested by health care professionals for the duration of the study.

TO SEE IF YOU OR A LOVED ONE QUALIFY, EMAIL US AT:
